

FINITE FIBER

A DOWCO, LLC Company

Finite Fiber has been a leading supplier of quality cut-fibers since 1923. Our experience and expertise is resulting in substantial performance improvements in product, production and profitability for our customers.

However, Finite Fiber is much more than a reliable source for accurately cut fibers. It is our mission to partner with each customer. We work with you through a progressive sequence of actions from initial objective determination meetings - to formula review - to recommendations of fiber type, size and volume - to testing. We also evaluate your production process to ensure that the improved fiber formulation produces the highest quality product with the most efficient production flow possible. We call it the **Start-To-Start** program. Start-To-Start means we are with you from the start of the project to the start of the first full production run.

Many feel that fiber is used either to improve strength or provide an inexpensive filler. Today, Finite Fiber and our experts, use fiber to positively

- Abrasion**
- Tensile Modulus**
- Compression Set**
- Cut Resistance**
- Green Strength**
- Tear Strength**
- Chunk-Out**
- Die-Swell**
- Noise**
- Cost**

Certified to ISO 9001: 2008

Finite Fiber pledges to always give the highest possible quality and individual attention to every order. Backing this pledge, we have attained ISO 9001 with the most current possible certification.

We thoroughly understand that every ingredient in your formula must have consistent quality so you can produce consistent quality products. We also promise reliable delivery so you can schedule your production with confidence.

Contact Finite Fiber to discuss how our fully confidential, no-cost partnering program can work to your benefit — improving your polymer product offering in the most cost-effective way possible.

We do this with companies across the country just like yours. We look forward to working with you, too.

Performance Products For Polymers

Start-to-Start

**Identify Cost and/or
Performance Benefits
for Specific Customer
Applications**

**Establish Fiber Type, Size and
Concentration Levels**

**Evaluate and Modify
Customer-Formulations
For Compatibility**

**Develop Test Protocols to
Evaluate Targeted Results**

**Optimize Customer
Production Processes
and Procedures**
